ABOUT

I've been interested in front end web development for a number of years. Only recently have I sought out professional training specifically for web development. What I love about web development is the user experience. It's what I think about anytime I interact with a ui. The two most important questions I ask when I participate in the development of any ui are: Does it facilitate a positive, intuitive, and accessible user experience? And does it look good?

EXPERIENCE

Software QA

Focused Support LLC, Logan UT | April 2019 - PRESENT
